

## Using Assessment Equivalents for Site Requirements

When a Site has a default Machine Assessment configured, any equivalent or better Assessment Type will be accepted for the site. This simplifies the configuration of sites, and minimises re-assessment where a machine has an existing Assessment that exceeds site requirements.

1. Log into Plant Assessor
2. Select Sites from the top menu
3. Find the desired Site and select Edit
4. Select the "Contact's Documents" tab
5. Select a minimum valid Machine Assessment type for the site
6. Note that the selected item will be checked on the left, and listed on the right hand side. Equivalent or better Assessment types will be automatically checked on the left with "(Equivalent Assessment)" appended to the label, and will be listed with an "=" sign on the right hand side.

RISK ASSESSMENT	REQUIRED
Hire	✓
Hire - MDG 15 (Equivalent Assessment)	✓
Hire - WA mining (Equivalent Assessment)	✓
Plant in use (Equivalent Assessment)	✓
Plant in use - MDG 15 (Equivalent Assessment)	✓
Plant in use - Rail Corridor (NSW) (Equivalent Assessment)	✓
Plant In Use - RMS (Equivalent Assessment)	✓
Plant in use - Road Rail (Equivalent Assessment)	✓
Plant in use - WA mining (Equivalent Assessment)	✓
BYO Plant Risk Assessment	✓
OTHER INSPECTIONS	REQUIRED
Off Hire Inspection	✓
Pre Hire Inspection	✓
Site Acceptance Checklist	✓

7. Click Save, then Close
8. On the Machines Page, find the machine on the previously configured site
9. Once the defaults have been set, the Machine Library hover will show equivalent assessments as fulfilling the requirement for site.

**Note:** It is advised that Site Administrators review the configuration for Assessment requirements to ensure the correct values are configured. Until this is completed, the existing configurations will still be respected.
